

DIRECTIONS FOR CARPENTER BEE KIT

Items included in kit:

Tempo Dust/16 oz This product is what you use in each hole that the bee has made.

Duster/1 This is the applicator for applying the dust in each hole.

Corks/50-1/2" Use after you have dusted each hole to plug the hole

Spray/1-8 oz This is what you spray on the outside of your home to help keep bee's away.

Application:

* **First step** is to treat the holes with the dust. Pour dust into the duster and apply in each hole. Leave the hole open for 3 to 4 days. This allows the female to fly in and out and carry the dust back to her chambers.

Second step is to plug the holes-you can use the corks provided in your kit or caulk will work also. Please be sure you treat each hole before you plug it. If untreated when the larva hatches they will use the same hole to get out or they will bore a new hole.

Third step is to spray the home down with the liquid spray. This spray will help control the bee's. Can be sprayed over stains or paints. It will not harm the finish. Use a pump up type hand sprayer for application. The spray is something you can use each spring and or fall to help fight bee's and many other pests. * *If the bee's are active you can spray first to get rid of them and then spray again after you do the first and second steps to keep them away. Follow application directions on the product label.*

READ ALL DIRECTIONS BEFORE USE!!!
